RMS

Robotic Mowing System

Autonomy for golf course mowers

www.positioned.com.au

100% Result, 0% Effort

Boost Productivity and Quality

Golf courses require a lot of work to keep the course in top condition. This takes time and effort. By equipping your mowers with TurfTroniq's smart control technology, mowing is carried out completely unmanned and extremely accurately. This improves the quality of the mowing job and frees up time for other maintenance tasks. You can get more with TurfTroniq's RMS.

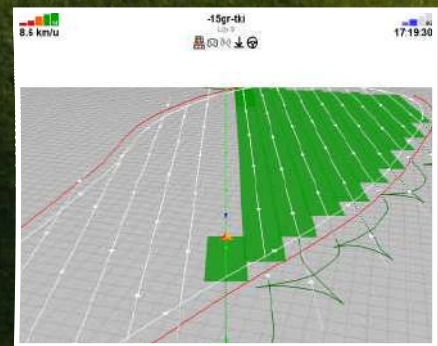

Ultimate Ease of Use

RMS is easy to operate. It uses the layout of your golf course that you record once with the mower. You can then simply compile mowing routes with different mowing patterns: stripes in different mowing directions, two-tone or curved stripes. Mowing routes are calculated automatically, including transport from mowing area to mowing area. To mow, choose the desired mowing route, drive the machine on the route and press 'Start'. Easy as that! When the machine is ready, the machine stops, the brake is put on and a notification is sent to you. After a few minutes of cooling, even the engine will switch off automatically.

Safety First

RMS is equipped with extensive safety features. The system monitors itself, the mower and stops the machine when there is an obstacle in front of or behind the machine. State-of-the-art 3D cameras are used for this. In addition, the machine is equipped with self-diagnosing bumpers and a remote control.

(Semi) Roughs

Cutting (semi-)roughs on golf courses is also possible using the add-on Teach&Playback technology for RMS. Teach&Playback lets you record mowing individual paths and connects them together to create a larger mowing route, suitable for most rotary or rough mowers.

Perfection

TurfTroniq RMS technology mows with centimeter precision: straight and accurate mowing passes and a smooth clean up lap. Mowing is consistent and the gentle turns contribute to unparalleled quality of work. With the smart control technology from TurfTroniq you always get the desired result: perfection.
